Playstation App - Summary

Released in November of 2013, this application was created for Android and iOS platforms. Once you login to the app, you can do many things that you can do on console, including see which friends are online, see which games your friends are playing, compare trophies, and get notifications about various events that are happening in the Playstation world. The application's creator, Sony, has developed multiple other applications that can be used alongside this one, including one for sending and receiving messages and the ability to use your device as a second screen while playing on console.

One of the best things about the Playstation App is that it's completely free. Anyone that has a Playstation account can login and use the app. One thing to remember is that it's only available on Android or iOS and it needs an internet connection to work. It's also available in 16 different languages and can be used in multiple different countries. The creators are constantly updating the app to ensure users have an enjoyable and seamless experience.

Key Functions

In addition to the things listed above, the Playstation App has many additional features. First off, users can customize their PSN profile without having to be logged into the console. Not only can they change their info sections, but they can also change their profile picture and their preferred language. Another key feature of the app is having the ability to create group voice chats, which allows you to add up to 14 other people. Users are also able to see their progress for the games they've played and check out which trophies they've gotten or which ones they need.

One of the features that is loved by many people is the ability to send a remote download to your console. You can go into the Playstation Store from the app and choose whole games or add-ons to download. There are also benefits that can only be used with the new PS5, including opening games or apps remotely. The app has strong protections and has regular updates to make the app better and easier to use. # Review/Conclusion
